# Cloud-Security-Assignment-1

## Q1. Log in to the AWS Management Console and navigate to the IAM dashboard; take a screenshot of the Users section showing the default view.

**Ans:**

**Screenshot 1: AWS IAM Users Section – Default View**

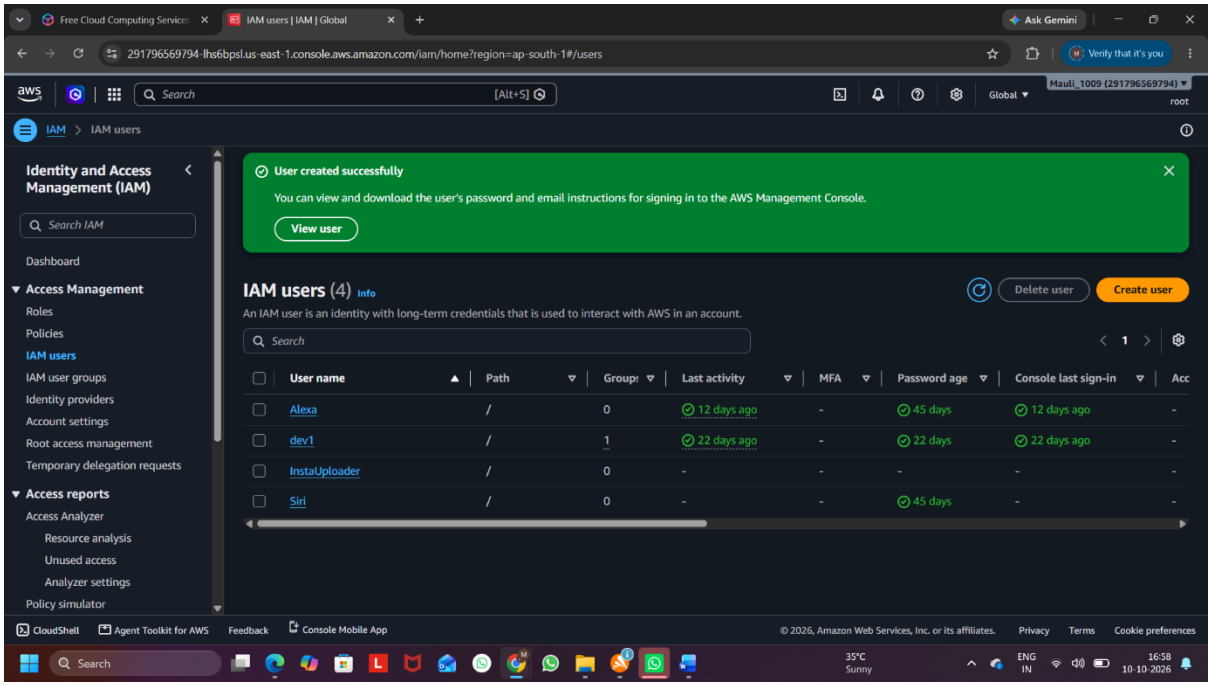

## Q2. Create a new IAM user named InstaUploader and assign programmatic access only. Download the access key file and note where you saved it. Hint: Do not attach any permissions yet—just create the user and save the credentials.

**Ans**:

### Create an IAM User with Programmatic Access

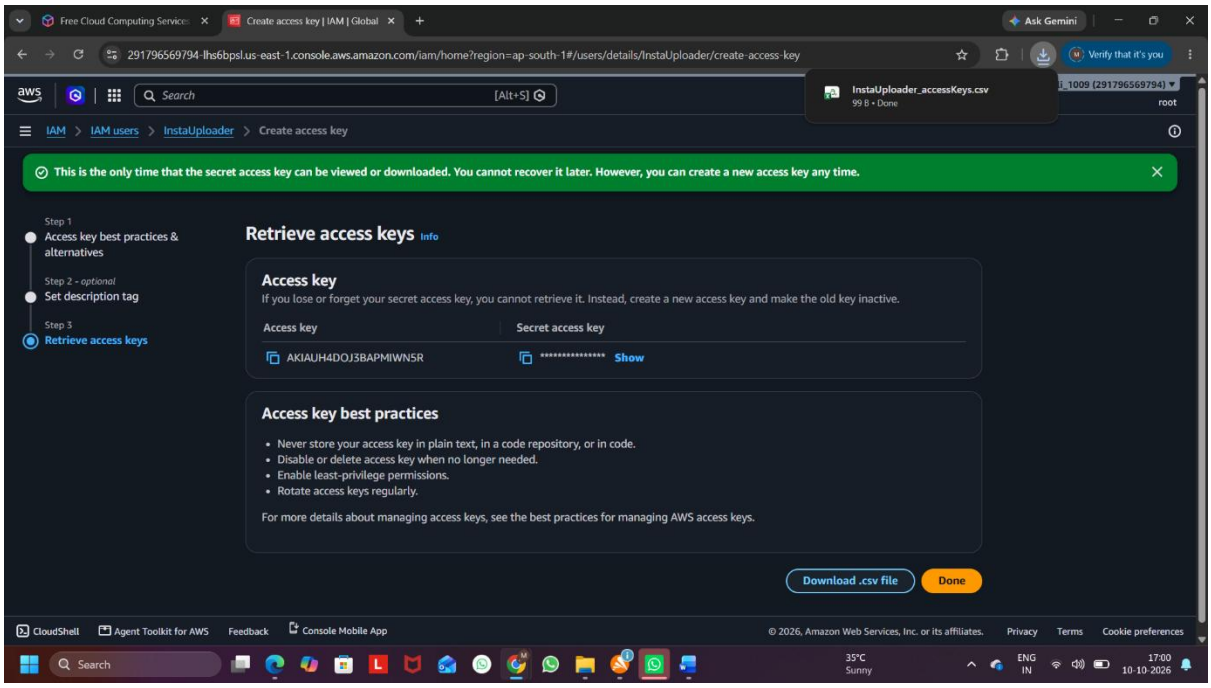

**Step 1:** Logged in to the AWS Management Console and navigated to IAM → Users.

**Step 2:** Created a new IAM user named InstaUploader.

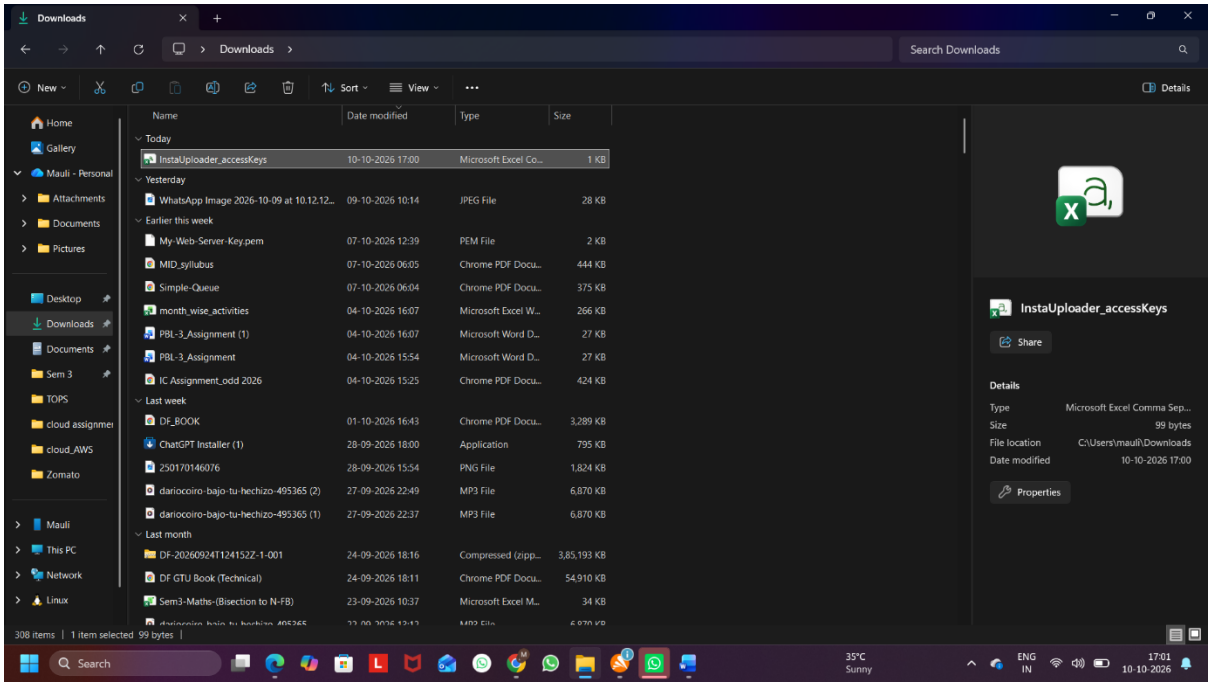

**Screenshot 1:** IAM Users List Showing the Newly Created User InstaUploader

**Step 3:** Configured the user for programmatic access only without attaching any permissions or IAM policies.

**Screenshot 2: IAM User Security Credentials and Access Keys**

**Step 4:** Generated the access key and downloaded the credentials file.

**Screenshot 3:** Downloaded IAM Access Key Credentials File

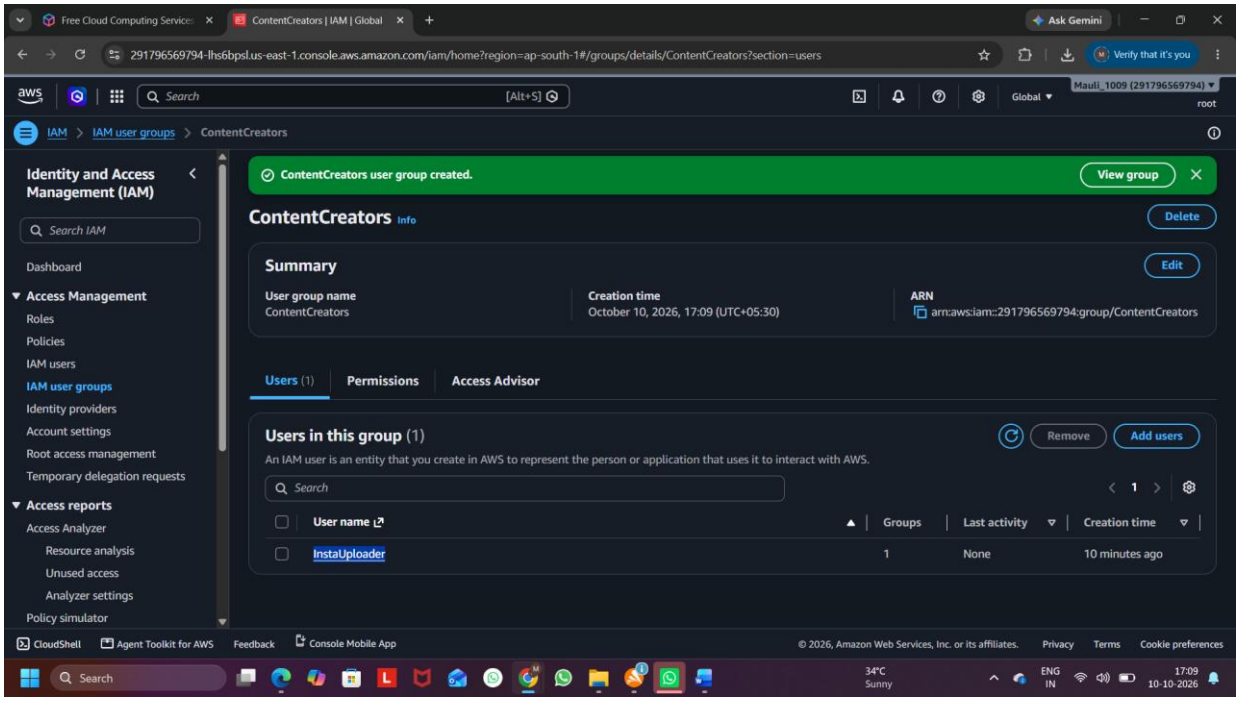

**Step 5:** Saved the credentials file in the Downloads folder.

**Result:** The IAM user InstaUploader was created without any attached permissions, and the access key credentials file was downloaded successfully.

**Credentials File Location:** C:\Users\mauli\Downloads\

## Q3.Create a group called ContentCreators in IAM, then add the InstaUploader user to this group.

Ans:

**Screenshot 1: ContentCreators IAM Group Created with InstaUploader User**

## Q4. Write a short explanation (3-4 lines) describing the difference between an IAM user and an IAM role, using an example from any app you use daily (e.g., Zomato delivery agent vs. Zomato app admin).

**Ans:**

An **IAM user** is a permanent identity with its own credentials, like a Zomato app admin who has a regular account to manage orders. An **IAM role** provides temporary permissions to an authorized person or service when needed, like a delivery agent receiving temporary access to delivery details. IAM users have their own long-term credentials, while IAM roles use temporary security credentials.
